

JUPITER

Cloud based next-gen revenue
management solution for Airlines

An Overview

Creating and filing optimized fares is always a challenging task for the revenue management function of any airline. It requires tedious manual work to analyze millions of filed fares and pricing analysts often are unable to leverage real-time market opportunities.

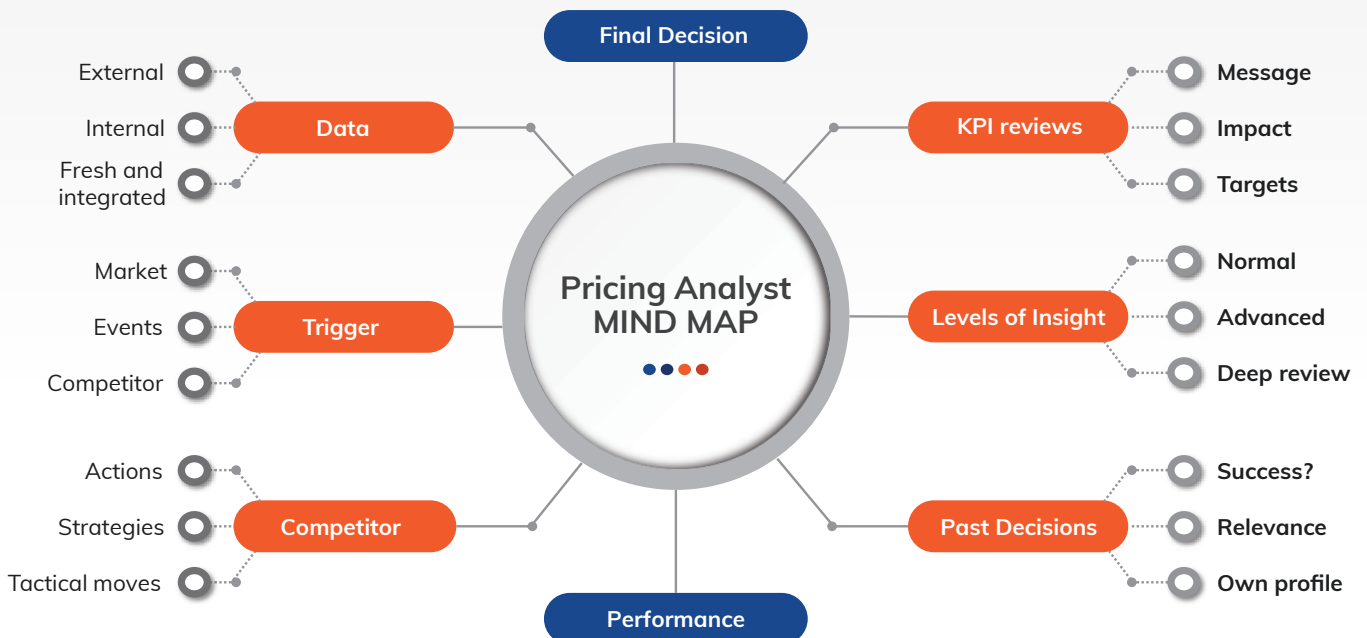

Jupiter is a next-gen airline pricing decision support solution that leverages digital technologies and deep industry expertise to bring about a modern approach to pricing distribution. It helps airlines design and publish optimal fares in real-time by taking into consideration various dynamic factors including inventory, volume, government rules, competition, market strategy etc.

PRICING ANALYST MIND-MAP

Jupiter is fully aligned to this mind-map with 1-5 click action

Key Features

360-degree pricing

- Supports complete range of core functionality
- Surcharge management
- Fares rules filing
